

Poker Card Analysis – March 2011

The Directors

Bwin.Party Digital Entertainment Plc

This is to confirm that iTech Labs has examined the game logs for Poker games for the period **March 01, 2011 to March 31, 2011** as recorded by the respective game servers and analyzed the Poker cards for statistical randomness. The results of the analysis are given below.

URLs: www.partypoker.com, www.empirepoker.com, www.poker.gamebookers.com, poker.intralot.it, www.partypoker.it, www.poker.4A.com, www.wptpoker.com

1. Actual and theoretical probabilities for various Poker hands

These calculations were done for Royal Flush, Straight Flush, Four of a Kind, Full House, Flush, Straight, 3 of a Kind, 2 pairs, 1 Pair, High Card. The following table compares the observed proportion of times the various types of hands occurred (**Sample** column). **Probability** column shows the theoretical values. **Lower** and **Upper** are the 95% confidence limits.

Hands	Probability	Lower	Sample	Upper
Royal Flush	0.00003	0.00002	0.00004	0.00004
Straight Flush	0.00028	0.00025	0.00028	0.00031
4 of a kind	0.00168	0.00160	0.00174	0.00176
Full House	0.02596	0.02567	0.02595	0.02625
Flush	0.03025	0.02993	0.03016	0.03057
Straight	0.04619	0.04580	0.04632	0.04658
3 of a kind	0.04830	0.04791	0.04848	0.04869
2 pairs	0.23496	0.23418	0.23486	0.23574
1 pair	0.43823	0.43732	0.43801	0.43914
High Card	0.17412	0.17342	0.17417	0.17482
	1.00000			

Notes:

- In the above table, all observed probabilities (**Sample** column) are within the 95% confidence limits.
- The probability of 0.43823 means there are 43,823 chances in 100,000 for getting a pair.

2. Actual and theoretical probabilities for Ranks

The theoretical probabilities for the ranks are shown in the **Probability** column. The **Sample** column shows observed probabilities. **Lower** and **Upper** are the 95% confidence limits.

Rank	Probability	Lower	Sample	Upper
A	0.07692	0.07674	0.07689	0.07711
2	0.07692	0.07674	0.07688	0.07711
3	0.07692	0.07674	0.07682	0.07711
4	0.07692	0.07674	0.07701	0.07711
5	0.07692	0.07674	0.07685	0.07711
6	0.07692	0.07674	0.07699	0.07711
7	0.07692	0.07674	0.07698	0.07711
8	0.07692	0.07674	0.07698	0.07711
9	0.07692	0.07674	0.07706	0.07711
10	0.07692	0.07674	0.07693	0.07711
J	0.07692	0.07674	0.07687	0.07711
Q	0.07692	0.07674	0.07692	0.07711
K	0.07692	0.07674	0.07682	0.07711

iTech Labs Australia ACN 108 249 761

Suite 24, 40 Montclair Ave, Glen Waverley, VIC 3150, Australia. Tel. +61 3 9561 9955 www.itechlabs.com.au

iTech Labs is an ISO/IEC 17025 NATA accredited testing laboratory

Notes:

- a) In the above table, all observed probabilities (**Sample** column) are within the 95% confidence limits.
- b) Theoretical probability of 0.07692 means, there are 7,692 chances for any particular rank to occur in 100,000 cards.

3. Actual and theoretical probabilities for Suits

The theoretical probabilities for the suits are shown in the **Probability** column. The **Sample** column shows observed probabilities. **Lower** and **Upper** are the 95% confidence limits.

Suit	Probability	Lower	Sample	Upper
Clubs	0.25000	0.24970	0.24999	0.25030
Diamonds	0.25000	0.24970	0.25011	0.25030
Hearts	0.25000	0.24970	0.24991	0.25030
Spade	0.25000	0.24970	0.24999	0.25030

Notes:

- a) In the above table, all numbers in the **Sample** column (observed probabilities) lie within 95% confidence intervals.
- b) Theoretical probability of 0.25 means, there are 25 chances for any particular suite to occur in 100 cards.

Comments on analysis

In the calculations for 'Actual and theoretical probabilities for various Poker hands', 'Actual and theoretical probabilities for Ranks' and 'Actual and theoretical probabilities for Suits', all 27 sample values lie inside the 95% confidence limits.

The above results for Poker indicate that the RNG is working correctly.

4. Conclusion

Analysis for 'Odds on various hands', 'Ranks' and 'Suits' indicated statistical randomness.

iTech Labs has done limited sanity checks to verify the integrity of the game logs. iTech Labs also maintains a copy of the game logs for verification purposes. There were a large enough number of game records to give the calculations sufficient statistical power.

We conclude that the Random Number Generator (RNG) is working correctly.
